DoesItOmarchy MCP

POST https://doesitomarchy.com/mcp 4 read-only tools · no key · 300 requests a minute per IP

THE TOOLS — find → read → help

search_macs `query` opt. `limit`
Find Macs by words or fields, with their verdicts.

get_mac `identifier` opt. `config`
One Mac's verdict per configuration, with failures and their evidence.

identify_mac any of `command_output` `product_name` `board_id` `cpu` `pci[]`
The Mac at hand and its exact configuration.

what_needs_testing `identifier` opt. `config`
What's untested or due a re-test on a Mac, and how to help.

SEARCH_MACS QUERY — plain words work too

year:	`year:2011` `year:>=2012` `year:2009..2012`
status:	untested, supported, partial, failed, unsupported or not-compatible (`blocked` = `not-compatible`)
tested:	yes or no (`yes` = any accepted result)
scope:	in or out (`out` = before 2009, and Xserve)
gles:	an OpenGL ES version: 2.0, 3.0, 3.1 or 3.2 (`2.0` = below Hyprland's floor)
gpu: cpu:	words in the name `gpu:nvidia` `gpu:6770m` `cpu:i7`
size: cores:	`size:13` `size:21.5` `cores:4`
form:	laptop, desktop, all-in-one or server
release:	early, mid or late
chip: efi:	none, t1 or t2 · 32 or 64
board:	`board:Mac-F2268CC8`
a: order: emc:	`a:A1286` `order:MC374LL/A` `emc:2353`
hw:	a PCI or USB ID `hw:10de:0647`
id: line:	`id:MacBookPro8` `line:imac` (no comma: the family)
port: feature:	prefix match `port:usb-c` `feature:touch-bar`
parts	**display: arch: wifi: bt: audio: camera: storage: ethernet: thunderbolt: firewire: reader: input: bridge:** words in the part's name `wifi:bcm4360`
a|b	either value `status:supported|partial`
-	leave out `-gpu:nvidia` `-xserve`

IDENTIFY A MAC — paste the output as command_output

Linux, on the Mac

```
cat /sys/class/dmi/id/product_name
/sys/class/dmi/id/board_name; grep -m1 "model name"
/proc/cpuinfo; for d in /sys/bus/pci/devices/*; do echo
"pci $(cat $d/vendor):$(cat $d/device)"; done
```

macOS

```
sysctl -n hw.model machdep.cpu.brand_string; ioreg -p
IODeviceTree -r -n / -d 1 | grep board-id; system_profiler
SPDisplaysDataType
```

ASK YOUR ASSISTANT — what it runs

Look things up

"Does Omarchy run on a MacBookAir7,2?"	`get_mac`
"Which Macs are below the GLES 3.0 floor?"	`gles:2.0`
"What did A1286 ship as?"	`a:A1286`
"Which Macs share board Mac-F2268CC8?"	`board:Mac-F2268CC8`

Coverage

"Which Macs are still untested?"	`tested:no`
"What's partial or failed from 2015 to 2020?"	`status:partial|failed year:2015..2020`
"Which 2006 Macs can't run Omarchy, and why?"	`status:not-compatible year:2006`

The Mac in front of you

"What Mac is this? (paste the output)"	`identify_mac`
"I have a MacBookPro11,3. How can I help?"	`what_needs_testing`

CONNECT

- **claude.ai, Claude Desktop:** Settings → Connectors → add a custom connector with the URL above.
- **ChatGPT:** Settings → Apps & Connectors → Advanced → developer mode; create a connector with the URL, no authentication.
- **VS Code, Cursor:** an `http` server with the URL (samples at /api#mcp).
- **Claude Code:**

```
claude mcp add --transport http doesitomarchy
https://doesitomarchy.com/mcp
```

TRY IT — list the tools

```
curl -s https://doesitomarchy.com/mcp \
 -H 'Content-Type: application/json' \
 -H 'Accept: application/json, text/event-stream' \
 -d '{"jsonrpc":"2.0","id":1,"method":"tools/list"}'
```

To call one, send `"method":"tools/call"` with `"params":{"name":"search_macs","arguments":{"query":"gles:2.0"}}`.

READING THE ANSWERS

- Verdicts belong to **configurations**, not Macs. **Untested** means no report yet, not that it fails.
- Configuration IDs look like `imac10-1-21-late-2009-b`; a wrong one lists the valid ones.
- A Mac sold under several names is named after the release asked about; `get_mac` for the whole Mac adds "Also sold as".
- "Note: field: expected ..." means the value is invalid, not merely unmatched.
- Answers link to the pages on doesitomarchy.com and name Macs as "Name [Identifier]".
